§01 · INTRODUCING ORAL ROOM

Practise your engineering oral out loud.

A voice examiner for MCA engineering orals. In build at sea. Waitlist open.

SWIPE →

§01 — THE PROBLEM — FIG. 01.2

01.2

The oral is a conversation. Most prep is reading.

You can know a system cold and still lose the thread when someone asks you out loud, then asks why, then asks what you'd do next. Reading notes doesn't train that. Saying it does.

§01 — THE GAP

FIG. 01.3

01.3

Engineers studying at sea get the least help.

No tutor on board. No study leave. A question list, a patchy connection and whatever time is left after your watch. That's the starting point most of us have.

§01 — WHAT I'M BUILDING — FIG. 01.4

01.4

A voice examiner, built to follow up.

- Examiner ..... VOICE, OUT LOUD
- Questions ..... MCA ENGINEERING ORALS
- Follow-ups ..... ON WHAT YOU SAID
- Open ..... WHENEVER YOU ARE
- Status ..... IN BUILD

§01 — WHO'S BUILDING IT — FIG. 01.5

01.5

Built by a marine engineer, not a training company.

Oral Room is being built by a serving 4th Engineer on an LNG carrier, between watches, while he prepares for his own next oral. Every answer the examiner works from is checked against source before it goes in.

§01 — NEXT STEP — WAITLIST OPEN

Join the waitlist.

First access when the examiner opens. The odd honest build update. Nothing else.
